

Double Kindergarten Werd Adliswil

The new construction of the double kindergarten Werd, built in timber element construction, is a Minergie-Eco certified constructive timber building, which was realized by us as a general contractor. It contains two classrooms with one group room each, a teachers' room, a spacious checkroom, a technical room and a toilet. We installed a total of 1550 m² of three-layer panels in the building, 840 m² of which are in visible quality on the walls and ceilings. A special feature are the round windows with a diameter of 1.70 meters, each located between the classroom and the group room. The facade with an area of 220 m² is also an eye-catcher. The battening in eye-catching 3-D optics was wave-milled on the CNC machine. The 148 white fir façade elements required for this were prefabricated in our factory.

Services:

- General contractor
- Prefabricated timber construction
- Façade cladding

Speciality:

- Façade
