

New building 6 detached houses in Niederlenz

The development is divided into six owner-occupied plots and one co-ownership plot, on which the detached houses ranging in size from 224m² to 288m² are located with their landscaped green areas and carports. The defined development standard was designed in such a way that the interior could be individually adapted to the customer's wishes. The 4 living levels appear in a light design with a lot of visible wood and the house impresses with its 40m² roof terrace, which is adjacent to a large loft. The pre-greyed façade with the use of different coloured sun blinds, the green roofs and the discreet design of the outdoor facilities skilfully round off the charm of the pocket houses.
