

In the village centre of Untersiggenthal, we realised the timber element construction including flat roofs in element construction as well as the substructure of the façades for a sports hall and additionally a multi-purpose hall with a total area of over 2000 m<sup>2</sup>. A major logistical and assembly challenge was the assembly of the 28 m long and 2.20 m high girders, which went smoothly thanks to foresighted planning and the commitment of an outstanding team. A total of 467m<sup>3</sup> of timber was used.

**Services**

Prefabricated timber construction

**Client**

Gemeinde Untersiggenthal  
Kornfeldweg 2  
5417 Untersiggenthal

**Architect**

NYX Architects GmbH  
Bändlistrasse 31  
8064 Zürich
