

Apartment buildings in Fribourg

Services:

- Prefabricated timber construction
- Façade cladding
- Interior fitting

Häring teamed up with arcad architectes SA to develop and build three identical apartment buildings, each comprising three apartments, in a neighbourhood of detached houses in Fribourg. The buildings were constructed using a deluxe version of our modular timber construction system. The windows, together with the vertical, pre-greyed spruce-cladding façades and slat curtains, were already attached in our factory. Inside, each ceiling features an exposed spruce panel and the walls are finished in white plaster. The first step was to build the core structures of the buildings using local concrete, before the protruding balconies were moved into place right at the end. The apartments were all fitted with air vents to ensure constant beneficial airflow. The extensively green roof and solar panels used in this project are now standard features.

Client

Häring & Co. AG
Sisslerstrasse 15
5074 Eiken
Switzerland

Architect

arcad architectes SA
Rue Jean Prouvé
1762 Givisiez
Switzerland

Area:

92 m²

Completion date:

31.05.2016

Duration:

9 months

Construction cost:

CHF 0.9 million

Project manager:

Oliver Hasler
