

Speech therapy school, Stein

Services:

- General contractor
- Prefabricated timber construction

Speciality:

- Akustikdecke
- Oberlichter

This school building in Stein is a two-storey modular timber construction. Its exterior and interior walls, as well as the roof, are made from insulated timber frame elements, while the ceilings are wood-concrete composite. The timber construction isn't obvious from the outside due to the hot-dip galvanised steel sheets and wooden and metal windows that obscure it. Even more eye-catching is the steel pergola that runs around the entire building.

Häring AG acted as the general contractor for part of this school building project.
