

## Training pavillon, Soprema AG

### Services:

- General contractor
- Prefabricated timber construction

This training centre in Spreitenbach is a single-storey modular timber construction. The building is divided into separate areas for practical exercises and theory, with toilet and changing facilities to the side. Its exterior and interior walls are made from insulated timber frame elements, and the roof consists of timber rib elements covered in insulation. The façade is clad with vertically aligned spruce formwork with a pre-greied surface. The interior surfaces are made of wood and plaster. Häring AG acted as the general contractor for this pavilion.
